MOCK REGULATORY DOCUMENT — ACRIS TEST DATA

Guidelines on AI and Automated Trading Systems

Version: V1 — 2025
Issue Date: 15 June 2025

Fictional test data for validating ACRIS regulation versioning and clause-level change detection. Not an official regulatory document.

1. Background

These Guidelines establish minimum requirements for regulated entities using AI or automated trading systems.

The objective is to promote safe, orderly and resilient automated trading while maintaining appropriate human oversight.

2. Mandatory Risk Controls

2.1 Governance. Each regulated entity shall designate a senior officer responsible for oversight of automated trading systems.

2.2 Pre-deployment testing. Material automated trading systems shall undergo documented testing before production deployment.

2.3 Trading limits. Entities shall establish appropriate position limits, order-value limits and loss thresholds.

2.4 Human oversight. Material automated trading systems shall remain subject to effective human supervision.

2.5 Change management. Material changes to trading logic or risk parameters shall be documented and approved before deployment.

3. Reporting Requirements

3.1 Entities shall maintain records of material automated trading systems, approvals, testing results and significant incidents.

3.2 Material incidents shall be reported to the competent authority without undue delay.

4. Compliance Review

4.1 Entities shall conduct an annual internal review of compliance with these Guidelines.
