MOCK REGULATORY DOCUMENT — ACRIS TEST DATA

Guidelines on AI and Automated Trading Systems

Version: V2 — 2026
Issue Date: 15 June 2026

Fictional test data for validating ACRIS regulation versioning and clause-level change detection. Not an official regulatory document.

1. Background

These Guidelines establish minimum requirements for regulated entities using AI or automated trading systems.

The objective is to promote safe, orderly and resilient automated trading while maintaining appropriate human oversight and operational resilience.

2. Mandatory Risk Controls

2.1 Governance. Each regulated entity shall designate a senior officer responsible for oversight of automated trading systems.

2.2 Pre-deployment testing. Material automated trading systems shall undergo documented testing before production deployment, including stress testing under abnormal market conditions.

2.3 Trading limits. Entities shall establish appropriate position limits, order-value limits, loss thresholds and automated kill-switch controls.

2.4 Human oversight. Material automated trading systems shall remain subject to effective human supervision.

2.5 Change management. Material changes to trading logic or risk parameters shall be documented, independently tested and approved before deployment.

3. Reporting Requirements

3.1 Entities shall maintain records of material automated trading systems, approvals, testing results and significant incidents.

3.2 Material incidents shall be reported to the competent authority within 24 hours of discovery.

3.3 Entities shall submit a quarterly compliance report covering material system changes, incidents and control breaches.

4. Compliance Review

4.1 Entities shall conduct a mandatory quarterly independent review of compliance with these Guidelines.

4.2 Audit findings and corrective actions shall be documented and made available for regulatory inspection.
